

Herbert Zahnen

Managing Director

Zahnen Technik GmbH

<http://www.zahnen-technik.de>

Bilateral Meetings

- Thursday 13:00 - 16:30

Description

Our integral approach to “zahnen water engineering performance” allows us to accompany our customers nationally and internationally when optimising, modernising or constructing their water and waste water treatment plants. To ensure that clean water remains affordable for the plant operators, and finally for consumers too, we have developed the unique, digital concept of ISO by Zahnen.

Organization Type

Producer, Company

Areas of Activities

Sustainable Water Management

Offer

ISO by Zahnen

ISO by Zahnen is a collective platform, where the complete water engineering performance is digitally collected. In addition, decades of Zahnen experience is digitised and combined to this one central point. With this concept we are revolutionising the market!

We would like to support all operators, engineering offices and plant constructors of wastewater treatment plants, all over the world, and help them to digitise their individual technical standards at their facilities.

For operators, this means

- more operational reliability,
- more viability for the future,

- better performance
- and significant cost reductions as a result.

For engineering offices, this means

- a higher quality of the tender documents
- the tender complies with the clients wishes 1:1
- a faster creation of the tender documents

For plant construction companies, this means

- clearly defined standards
- and time saving in Engineering
- by Generating productive documents (circuit diagrams, PLC programs, construction documents, documentation)

Cooperation Offered

1. Technical co-operation
2. License agreement
