Bilateral Meetings

- Thursday 10:00 - 12:00

Description

Energy efficiency and capacity increase for aerobic treatment processes We are a company which combines long-time experience with innovative ideas and applies them in the area of environmental technology. Our core competence is providing unique aeration solutions for biological wastewater treatment. Forty years ago Arnold Jäger developed the first rubber membrane diffuser in cooperation with the leading German wastewater treatment plants. Our second technology is Cleartec® Biotextil and Cleartec® BioCurlz - a textile fixed bed to increase capacity and efficiency of biological wastewater treatment in industry and municipality For every application we offer the right tailor-made solution.
