- Thursday 10:00 - 12:00
- Thursday 13:00 - 16:30

Description

Gajek Engineering is designing and manufacturing machinery, equipment and control systems for Hydro Power Plants. Based on its own knowledge and extensive experience we are able to deliver proven design solutions in many areas connected with Water Power Engineering. We specialize in: - Kaplan and Francis turbines, - Equipment selection and conceptual designs of HPP's, - Governors for all sorts of HPP's equipment, - Gearboxes for water turbines, - Modernization and reconstruction of water turbines and HPP's, - SCADA systems, - Trash screen cleaners, - Power output systems for HPP's. Our company develops documentation, orders and supervise manufacturing and implementation of the elements in specialized national and international facilities. We carry out installation, commissioning and technical tests, give guarantees and provide service after the warranty period.
